INDICATION
CLENPIQ® is a prescription medicine used by adults and children 9 years and older to clean the colon before a colonoscopy. CLENPIQ cleans your colon by causing you to have diarrhea. Cleaning your colon helps your healthcare provider see the inside of your colon more clearly during your colonoscopy.

IMPORTANT SAFETY INFORMATION
• Do not take CLENPIQ if your healthcare provider has told you that you have serious kidney problems, a blockage in your intestine (bowel obstruction), an opening in the wall of your stomach or intestines (bowel perforation), a very dilated intestine (toxic megacolon), problems with the emptying of food and fluid from your stomach (gastric retention), or an allergy to any of the ingredients in CLENPIQ.
• CLENPIQ and other bowel preparations can cause serious side effects, including serious loss of body fluid (dehydration) and changes in blood salts (electrolytes) in your blood. These changes can cause abnormal heartbeats that may result in death, seizures (this can happen even if you have never had a seizure), or kidney problems. Your chance of having fluid loss and changes in blood salts with CLENPIQ is higher if you have heart problems, have kidney problems, or take water pills or non-steroidal anti-inflammatory drugs (NSAIDS).

See Important Safety Information continued on the back.

IMPORTANT SAFETY INFORMATION (CONTINUED)

• Your healthcare provider may do blood tests after you take CLENPIQ to check your blood for changes. Tell your healthcare provider right away if you have any of these symptoms resulting from a loss of too much body fluid (dehydration): vomiting, nausea, bloating, dizziness, stomach-area (abdominal) cramping, urinating less often than normal, trouble drinking clear liquids, troubles swallowing, seizures, or heart problems.

• CLENPIQ® can cause ulcers of the bowel or bowel problems (ischemic colitis). Tell your healthcare provider right away if you have severe stomach-area (abdominal) pain or rectal bleeding.

• The most common side effects of CLENPIQ® in adults include nausea, headache, high magnesium levels in your blood, dehydration or dizziness and stomach area (abdominal) pain. The most common side effects of CLENPIQ® in children 9 to 16 years of age include nausea, vomiting and stomach area (abdominal) pain. These are not all the possible side effects of CLENPIQ®. Ask your doctor or pharmacist for more information.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088.
